Q1

You have a Microsoft Exchange Server 2019 organization that contains 200 mailboxes.

You need to add a second email address to each mailbox. The address must have a syntax that uses the first letter of each user's last name, followed by the user's first name, and then @fabrikam.com.

Solution: You convert all the mailboxes to shared mailboxes, and then you run the cmdlet and specify the -EmailAddressPolicyEnabled \$false parameter.

Set-Mailbox

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Email address policies define the rules that create email addresses for recipients in your Exchange organization.

The basic components of an email address policy are:

Email address templates: Define the email address format for the recipients (for example

<firstname>@contoso.com or <lastname>.<firstname>@contoso.com).

Recipient filter: Specifies the recipients whose email addresses are configured by the policy.

Priority: Specifies the order to apply the email address policies (important if a recipient is identified by more than one policy).

The EmailAddressPolicyEnabled parameter specifies whether to apply email address policies to this recipient.

Valid values are:

\$true: Email address policies are applied to this recipient. This is the default value.

\$false: Email address policies aren't applied to this recipient.

Q2

You have a Microsoft Exchange Server 2019 organization that contains 200 mailboxes.

You need to add a second email address to each mailbox. The address must have a syntax that uses the first letter of each user's last name, followed by the user's first name, and then @fabrikam.com.

Solution: You create an email address policy that uses the %1s%g@fabrikam.com email address format.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Reference:

<https://docs.microsoft.com/en-us/exchange/email-addresses-and-address-books/email-address-policies/email-address-policies?view=exchserver-2019>

Q3

You have a Microsoft Exchange Server 2019 organization that contains 200 mailboxes.

You need to add a second email address to each mailbox. The address must have a syntax that uses the first letter of each user's last name, followed by the user's first name, and then @fabrikam.com.

Solution: You convert all the mailboxes to shared mailboxes, and then you run the cmdlet and specify the -EmailAddressPolicyEnabled \$true parameter.

Set-Mailbox

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Email address policies define the rules that create email addresses for recipients in your Exchange organization.

The basic components of an email address policy are:

Email address templates: Define the email address format for the recipients (for example

<firstname>@contoso.com or <lastname>.<firstname>@contoso.com).

Recipient filter: Specifies the recipients whose email addresses are configured by the policy.

Priority: Specifies the order to apply the email address policies (important if a recipient is identified by more than one policy).

The `EmailAddressPolicyEnabled` parameter specifies whether to apply email address policies to this recipient.

Valid values are:

`$true`: Email address policies are applied to this recipient. This is the default value.

`$false`: Email address policies aren't applied to this recipient.

Q4

HOTSPOT

You have a Microsoft Exchange Online subscription.

You run the following command.

```
Set-ActiveSyncOrganizationSettings -DefaultAccessLevel Block
```

You run `Get-ActiveSyncDeviceAccessRule | fl`

and you receive the following output.

```
Identity,AccessLevel,Characteristic,QueryString,
```

Identity : Outlook-Android/2.0 (UserAgent)
AccessLevel : Allow
Characteristic : UserAgent
QueryString : Outlook-Android/2.0

Identity : Outlook-iOS/2.0 (UserAgent)
AccessLevel : Allow
Characteristic : UserAgent
QueryString : Outlook-iOS/2.0

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
iOS devices can use the Microsoft Outlook app to sync mailbox data.	<input type="radio"/>	<input type="radio"/>
Android devices can use the Microsoft Outlook app to sync mailbox data.	<input type="radio"/>	<input type="radio"/>
iOS devices can use the native Mail app to sync mailbox data.	<input type="radio"/>	<input type="radio"/>

Answer:

Answer Area

Statements	Yes	No
iOS devices can use the Microsoft Outlook app to sync mailbox data.	<input checked="" type="radio"/>	<input type="radio"/>
Android devices can use the Microsoft Outlook app to sync mailbox data.	<input checked="" type="radio"/>	<input type="radio"/>
iOS devices can use the native Mail app to sync mailbox data.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation

Q5

DRAG DROP

You have a Microsoft Exchange Online tenant.

You enable hierarchical address books (HABs).

You create a new distribution group named Contoso.

You need to configure the Contoso group as the root of the hierarchy. The members of the group must appear in the hierarchy.

How should you complete the PowerShell commands? To answer, drag the appropriate cmdlets to the correct targets. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Cmdlets

- Set-AddressList
- Set-GlobalAddressList
- Set-Group
- Set-OrganizationConfig
- Set-UnifiedGroup

Answer Area

- Cmdlet -HierarchicalAddressBookRoot "Contoso"
- Cmdlet -Identity "Contoso" -IsHierarchicalGroup \$true

Answer:

Cmdlets

- Set-AddressList
- Set-GlobalAddressList
- Set-Group
- Set-OrganizationConfig
- Set-UnifiedGroup

Answer Area

- Set-OrganizationConfig -HierarchicalAddressBookRoot "Contoso"
- Set-Group -Identity "Contoso" -IsHierarchicalGroup \$true

Reference:

<https://docs.microsoft.com/en-us/exchange/address-books/hierarchical-address-books/enable-or-disable-hierarchical-address-books>

Q6

You have a Microsoft 365 subscription.

Several users report today that they cannot access email from their mobile device. They successfully accessed their email from the same device yesterday.

You need to identify which mobile device access rule applies to the devices.

Which cmdlet should you run?

- A. Get-DeviceTenantRule
- B. Get-ActiveSyncOrganizationSettings
- C. Get-MobileDevice
- D. Get-MobileDeviceMailboxPolicy

Answer: C

Explanation:

The Get-MobileDevice cmdlet returns identification, configuration, and status information for each mobile device.

Note: The Get-MobileDeviceStatistics cmdlet can also be used.

Reference:

<https://docs.microsoft.com/en-us/powershell/module/exchange/devices/get-mobiledevice?view=exchange-ps>

Q7

You have a Microsoft Exchange Online tenant.

All users are assigned only an Office 365 Enterprise E3 license.

You need to ensure that the users can use only Microsoft Outlook to connect to their Microsoft 365 mailbox when they connect from an Android device.

What should you create?

- A. a conditional access policy in Azure Active Directory (Azure AD)
- B. a connection filter policy in Exchange Online Protection (EOP)
- C. an Outlook Web App policy in Exchange Online

D. a mobile device mailbox policy in Exchange Online

Answer: D

Explanation:

Use the `ApprovedApplicationList` with the `New-MobileDeviceMailboxPolicy` cmdlet. This option is only available in PowerShell and not in the Exchange Admin Console.

Not A. Conditional Access Policy requires Azure Premium P1 which is not included in an Office 365 Enterprise E3 license.

Reference:

<https://docs.microsoft.com/en-us/powershell/module/exchange/new-mobiledevicemailboxpolicy?view=exchange-ps>

Q8

You manage a hybrid deployment between Microsoft Exchange Online and on-premises Exchange Server 2019. The deployment contains a primary SMTP domain named `contoso.com`.

Users have email addresses that use a syntax of `firstname.lastname@contoso.com`.

A user named Ben Smith receives a new client computer. You configure the computer to access Ben Smith's mailbox. Ben Smith reports that he cannot connect to his mailbox from the new computer.

You verify that other users can connect successfully to their mailbox and that new users can discover their mailboxes by using Autodiscover.

You need to ensure that Ben Smith can connect to his mailbox from the new computer.

What should you do?

- A. Modify the `primarySmtpAddress` property for the mailbox of Ben Smith.
- B. Modify the `RemoteRoutingAddress` parameter for the mailbox of Ben Smith.
- C. Modify the email address of Ben Smith to use a syntax of `lastname.firstname@contoso.com`.
- D. Modify the email address of Ben Smith to use a syntax of `firstname.lastname@contoso.onmicrosoft.com`.

Answer: B

Q9

You have a Microsoft Exchange Online tenant that contains 1,000 user mailboxes and 10 mail-enabled users. The mail-enabled users have email addresses in two SMTP domains named fabrikam.com and contoso.com.

You need to convert the mail-enabled users into user mailboxes.

What should you do first?

- A. Remove the remote domains of fabrikam.com and contoso.com.
- B. Assign a license to each user.
- C. Add the users to an Office 365 group.
- D. Modify the email forwarding settings of each user.

Answer: A

Explanation:

You need to remove the remote domains first then assign a license to the user account.

Q10

You have two mailboxes named Mailbox1 and Mailbox2 that have the ProhibitSendReceiveQuota parameter set to 50 GB.

From a Microsoft Exchange Online tenant, you run the following PowerShell command.

```
PS C:\> Get-Mailbox | Select-Object Alias, RecipientTypeDetails | FT -AutoSize
```

Alias	RecipientTypeDetails
Mailbox1	SharedMailbox
Mailbox2	RoomMailbox

You receive the license status of each mailbox and discover the configurations shown in the following table.

Alias	SKUAssigned
Mailbox1	False
Mailbox2	False

You need to increase the quota for Mailbox1 and Mailbox2.

What should you do first?

- A. Enable an archive for each mailbox.
- B. Assign a license to each mailbox.
- C. Place both mailboxes on retention hold.
- D. Convert each mailbox into an equipment mailbox.

Answer: B

Explanation:

Shared and resource mailboxes don't require a license. However, without a license, these mailboxes are limited to 50 GB. To increase the mailbox size, an E3 or E5 license must be assigned. This will increase the mailbox to 100 GB.
